

Website Content

A. Title

– The title for my website is called “Abydos Trip”, and I made it as a website for people who want to tour around Abydos, which resides in Kivotos, a fictional city composed of multiple Academy Cities.

B. Structure

– There is a blue bar which has “HOME”, “ABOUT US”, “TICKETS”, and “CONTACT”, that can be pressed which will take the user to its specified destination. The logo for Abydos High School is in the center, and just below the logo, is an introduction of the students of the school. Right now, they are prioritizing the restoration in order to open multiple tourist spots around Abydos.

C. Content

– The content varies on what part you scroll to. You can see the current students who are working on the project, with a former student as a tribute to her. Below that, there are three main locations that are meant to attract tourists and students alike, with a rich history of what happened in Abydos during the tough times. There are also buttons that will let you buy tickets for the specific date that you can go to. Lastly, there is a “Contact” section where you can directly send an email to them, and even give them a message to give them a nice note, for all the hard work they’ve done.

D. Functionality

– At the header section, people can press a button that will either take them to the Home section, the About Us section, the Tickets section and the Contact section. As of now, those are the only available functions that this website has. It’s not possible to buy a ticket, nor is it possible to send a note either.

F. Styling

– The styling is mostly based on a classic website, with a simple style that can attract a user back in the 90’s or so. All of the things inside the website are coded in a CSS file. In all honesty, I chose to design it like this, because I wanted it to stay as minimalistic as possible. For the pictures and icons, I have used it from a game called “Blue Archive”, which was perfect for the website.
